

McLouth Steel RI/FS Update

Community Advisory Group Meeting

November 9, 2023

Christopher Vandegrift, Project Manager, CDM Smith Nilia Moberly Green, Remedial Project Manager, USEPA

Remedial Investigation / Feasibility Study (RI/FS)- review

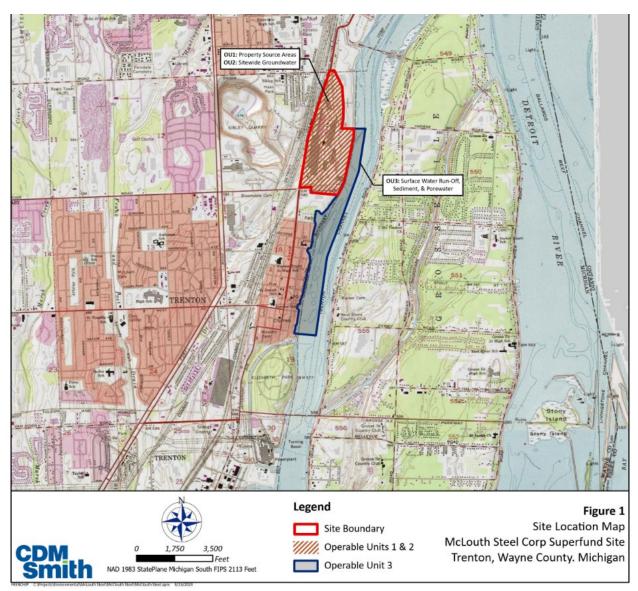

- A Remedial Investigation is being performed to collect information on the nature and extent of contamination at the former steel plant property.
- The goals of the RI are two-fold:
 - to provide enough detail to assess the risks posed by the site to human health and the environment, and
 - to enable evaluation of potential and appropriate remedial measures in the Feasibility Study.

McLouth Steel

Southern Portion - Three Operable Units

- Operable Unit 1(OU1) Source Areas
 - Releases to the land, fill materials, steel plant slag, etc.
- Operable Unit 2 (OU2) Groundwater
 - Impacts to groundwater, assessment of site hydrogeology, evaluation groundwater discharge
- Operable Unit 3 (OU3)- Trenton
 Channel
 - Groundwater discharge to surface water, impacts to sediment and porewater

Southern Portion - Work Completed

- Review and compilation of prior investigations
- Site reconnaissance and assessment of existing monitoring wells
- Drone surveys
- Geophysical surveys and utility clearance
- Soil borings, monitoring well installations, well development
- ✓ Soil sampling for chemical laboratory analysis
- Surface water and sediment sampling
- Groundwater sampling November 2023

Terrain Conductivity (TC)

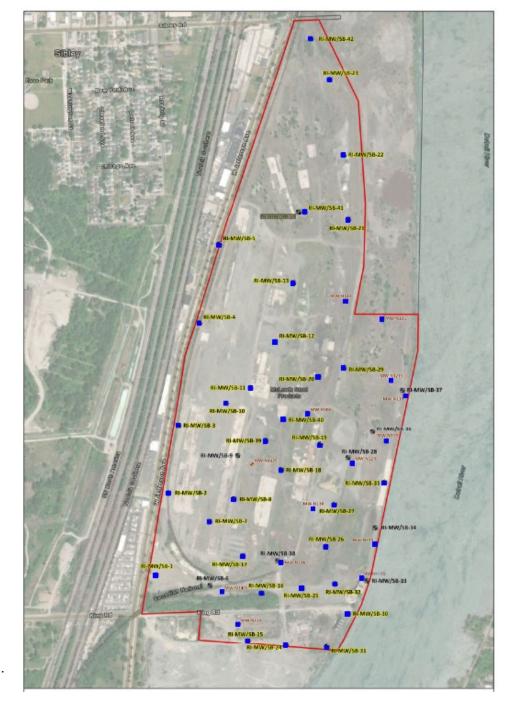

TC Anomalies

Southern Portion – OU1 and OU2 Work In Progress

- Soil sample laboratory analysis
 - ➤ 110 soil samples collected at various depths from 42 locations
- Synoptic rounds of water level elevation measurements
- Groundwater Sampling
 - Well elevation and coordinate survey
 - > 33 new and 13 existing redeveloped wells
- Hydraulic testing of monitoring wells
 Image showing monitoring well locations ready for sampling.

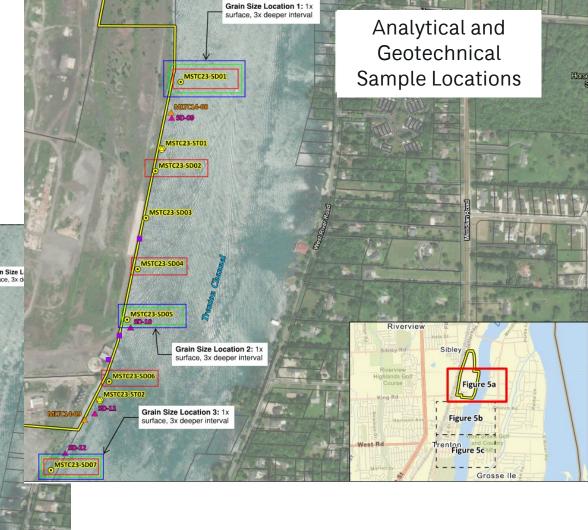

Recently Completed - OU3

Sediment Sampling

- 23 locations, surface samples (0-0.5') by Ponar dredge and collection of core via by Mudpuppy and vibracore
- Core sample depths 0-1',1-2', 2-3', 3-5', every two feet thereafter to native clay or refusal
- 6 locations for geotechnical sample collection
- 44 Sediment samples were collected from various depth intervals

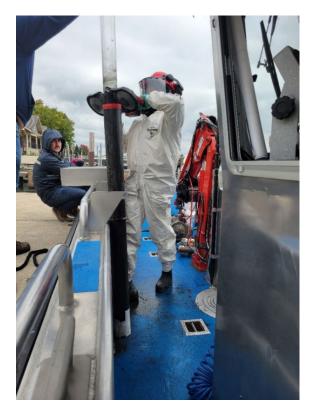

OU3 Sampling Locations

Sediment Sampling

EPA's Mudpuppy

A Ponar Dredge

Vibracore sediment collection in Lexan tubes

Trenton River Channel Sediment above Native Clay

OU3 – WORK TO BE COMPLETED

- Sediment Trap Sampling
 - ➤ Deployment –November 2023
 - > Retrieval December 2023/January 2024
- Surface Water Sampling
 - ➤ November/December 2023-weather dependent
- Bathymetric Surveying
 - ➤ December 2023
- > Sediment and surface water laboratory analysis
 - > 44 sediment, up to 10 surface water, and 4 sediment trap samples

Images of sediment traps and deployment/retrieval operations.

What's Next - General Schedule

- Fall / Winter 2023 Completion of Year 1 OU1/OU2 & OU3 Field Work
- 1st Quarter 2024 Evaluation of OU1/OU2/OU3 Field and Laboratory Data
- 2nd Quarter 2024 Draft Technical Memorandum to EPA
- Spring / Summer 2024 Year 2 Field Work
- Fall 2024 Completion Remedial Investigation and Risk Assessment
- Spring 2025 Preparation of Feasibility Study
- Fall 2025 Public Participation on Proposed Plan
- October 2025 Expected timeframe for Record of Decision for McLouth Steel
